Product highlights

Ultra SlimLine TV
Philips SlimLine TV uses a slimmer CRT tube to give an overall slimmer TV that is up to 40% thinner than a traditional CRT TV while delivering the same superior picture quality.

Crystal Clear
Combining picture enhancements like Contrast plus and color improvement, Crystal Clear improves picture depth.

Noise Reduction
During weak signal transmission, random noise will appear on the image. When viewed, the image contains dark and white dots. Noise reduction significantly reduces the appearance of these dots, hence creating a pleasant viewing experience.

Contrast & Sharpness Control
Contrast and Sharpness Control for better image control

Incredible Surround™
Incredible Surround is an audio technology from Philips that dramatically magnifies the sound field to immerse you in the audio. Using state-of-the-art electronic phase shifting, Incredible Surround mixes sounds from left and right in such a way that it expands the virtual distance between the two speakers. This wider spread greatly enhances the stereo effect and creates a more natural sound dimension. Incredible Surround allows you to experience total surround with greater depth and width of sound, without the use of additional speakers.

SAP
Secondary Audio Program (SAP) allows you to choose another language in program where two languages are available.

Closed Caption
Closed Caption displays text data, subtitles for spoken audio or alternate language when available.

Smart Picture and Smart Sound
Philips preset modes for Smart Picture and Smart Sound provide you with direct access via a single key on the remote control. You can select optimized picture and sound settings for the various picture and sound modes.

Component Video Input (YPbPr)
Component Video is the highest quality interconnection standard for analog video. It is sharper than S-video and composite video.
